

# convert your car to also run on LPG autogas

## it's the third fuel in the UK

LPG autogas is by far the most widely available environmentally friendly alternative fuel with over 1400 refueling sites throughout the UK, most of which are on petrol forecourts.

## Why Convert to LPG Autogas?

### It's Greener

Driving your car or van on LPG autogas reduces your carbon footprint and your contribution to global warming.

Extensive independent tests demonstrated that running on LPG autogas resulted in a 14% reduction in carbon dioxide (CO<sub>2</sub>) emissions when compared to the equivalent petrol vehicle and a 10% advantage over the equivalent diesel.

### It's Cleaner

LPG autogas is regarded as a cleaner fuel because its simple chemical composition means it is a very clean burning.

This is important for the quality of the air you breathe which directly affects your health. Particulates accumulate in your lungs and LPG engines were shown to have around 99% less per mile of these polluting emissions than diesels.

Additionally one diesel vehicle emits the same amount of Nitrogen Oxides (NO<sub>x</sub>) as 20 LPG autogas vehicles.

### It's Cheaper

LPG autogas averages around half the price of petrol and diesel.

The immediate substantial savings in your fuel costs means that converting your car or van could pay for itself very quickly. There are also other ways that LPG autogas can save you money such as reduced car tax and some discounts on parking and London Congestion Charges.

# Why Choose a UKLPG Approved Autogas Installer?

## UK LPG Vehicle Register

There is now a central online register of vehicles converted to run on LPG, whether converted by a UKLPG Approved Autogas Installer, or inspected by them and found to be satisfactory. Any conversion can be certified in this way – be like the insurance companies and ensure a vehicle has been converted properly – check at [www.drivelpg.co.uk](http://www.drivelpg.co.uk)

Only UKLPG Approved Autogas Installers are able to add your vehicle to the Register.

## About UKLPG Approved Autogas Installers

UKLPG Approved Autogas Installers provide consumers with the assurance that the conversion will be undertaken in a safe and satisfactory manner. UKLPG operates quality assurance spot checks on customers' vehicles which have been converted, and a full procedure for dealing with complaints

The arrangements were set up in consultation with the Department for Transport, is the standard for the industry and only UKLPG Approved Autogas Installers receive official Government recognition.

Consumers should look out for the above logo which is only available to UKLPG Approved Autogas Installers. A check against misrepresentation can be verified by checking on [www.drivelpg.co.uk](http://www.drivelpg.co.uk)

## Quality Assurance Programme

UKLPG operates a system of random inspections of vehicles converted by UKLPG Approved Autogas Installers. The Association will select a vehicle to be inspected and arrange for the installer to obtain the agreement of the customer for the Association to arrange direct with the customer for the inspection at the customer's convenience. There is no cost to the customer and the inspections are undertaken at the customers chosen location.

## Customer Satisfaction

All participants in the Scheme agree to comply with the Consumer Code of the Association. A copy can be obtained from any UKLPG Approved Autogas Installer or direct from the Association at [www.drivelpg.co.uk](http://www.drivelpg.co.uk). In the event of any dissatisfaction, UKLPG operates a complaints procedure and can provide an arbitration service. Failure to meet standards can lead to installers losing their approved status.
